

SAVE MONEY WITH EASY-TO-USE VEHICLE TRACKING

Trimble MRM offer easy-to-use GPS vehicle tracking systems for companies of all sizes. Our fleet management solutions combine the latest GPS, wireless and Internet technologies with software applications that make it easy for you to see where your vehicles are and what your drivers are doing during work hours. With this information, you can reduce operating and fuel costs while improving driver safety and raising the quality of customer experience.

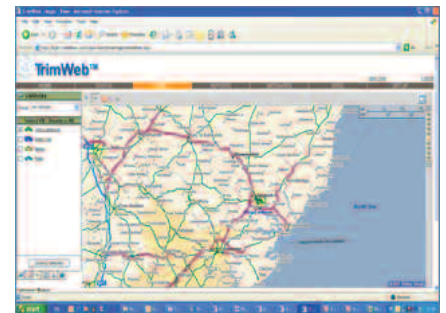

Trimble MRM offers a range of flexible solutions to meet your individual fleet management requirements, whether you are looking for standard vehicle tracking or more robust solutions that include capabilities like Wi-Fi hotspots and specialized reporting.

TRIMWEB

TrimWeb, our standard GPS vehicle tracking solution, is ideal for customers who want a high-quality, easy-to-use solution at a competitive all-in-one price that includes hardware, service, installation and warranty.

- See your fleet in real time, anytime, by logging on to TrimWeb via the Internet
- View minute by minute updates of the locations of all your vehicle
- View standard reports on vehicle activities such as stops, mileage, time on site and speeding
- Monitor specific areas to see who comes and goes on a particular site, such as a depot or customer location
- View "Vehicle Playback" to see the route a vehicle has taken
- Add optional 2-way messaging between vehicles and dispatchers

- Standard, easy-to-use GPS vehicle tracking
- Internet hosted – no software installation needed
- In-vehicle hardware professionally installed at your convenience

TRIMVIEW

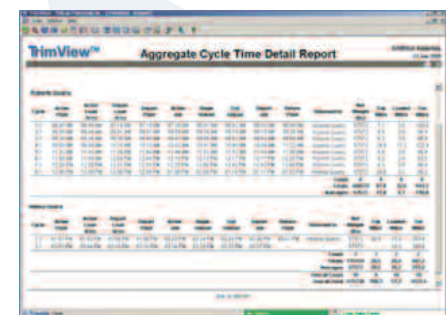

TrimView is an advanced solution which offers you the ability to "locally host" your data and maps, allowing you onsite access to your company's data. This enables improved reporting performance as well as specialized features such as:

- Enhanced tailored reporting to include any TrimView information you may require
- The ability to retain data longer than the 90 day standard period

In addition, with TrimView you can:

- Integrate TrimView with other software within your business so you can easily take TrimView data and use it in another application
- Access industry-specific features for ready mixed concrete and aggregate haulers

- Full-featured GPS vehicle tracking with customizable options
- Locally hosted data and maps, so vehicle data can be used in other applications
- Easy software self-installation; hardware is professionally installed at your convenience

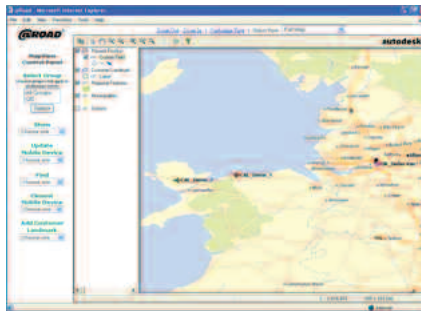

GEOMANAGER

GeoManager provides a step up from standard GPS vehicle tracking and is packed full of extra features. If you want additional cost savings from advanced vehicle tracking or have specific needs that require a tailored solution, then we suggest GeoManager is the right solution for you.

In addition to the TrimWeb features listed, GeoManager also includes:

- 50+ types of reports, providing detailed information on mobile worker activities and vehicle status
- Real-time Exception alerts, when any out-of-the-ordinary behavior in the field triggers an instant notification via email or text.
- Vehicle maintenance management with alerts for maintenance due
- Vehicle diagnostics, which connects to and monitors engine bus diagnostic codes and alerts you to potential vehicle problems
- Sensor services for monitoring temperature-controlled vehicle compartments or tracking when a door is opened or closed at delivery sites
- Wi-Fi hotspot, allowing secure Internet access for your mobile computer through the vehicle-installed hardware
- 3G connectivity, enabling you to transmit and receive large quantities of data quickly between the vehicle and the office

- Fully-featured GPS vehicle tracking with customizable options
- Internet hosted – no software installation needed
- In-vehicle hardware professionally installed at your convenience
